

ARCHITECTS & INTERIOR DESIGNERS UPDATE MARCH 2021

Fantastic Designs For Everyday Living

Architects, interior designers and home-owners who are challenged with limited home or apartment floor plans are always looking for innovative ways to maximize available space.

In this latest update edition, we take you behind the scene at one of our Manhattan client's beautiful Conservatory room where we installed a state-of-the-art digital media system.

Step 1. Project Overview

Design and install a new video and surround sound system. In addition to Sonos Streaming and new digital FiOS cable system, we installed a new LG 65" 8k TV. We added a JBL Synthesis System and with the help of our on-site technician and his \$30k calibration equipment we were able to make precise adjustments to each of the system components ensuring the client an ultimate sound and viewing experience.

Step 2. The Build Out

In order to install the new audio and video system components, we need access to the concealed equipment racks. To begin, we set down roller tracks and easily glide the equipment racks out.

Step 3. Installation Inspection

After all of the audio and video equipment is installed, we collaborate and test each piece of equipment.

Step 4. Completed Project

We prepare to encase the new system behind the custom designed doors and cabinets.

After clean up and a final system test, we are done!
